Vocabulary

mystery science

Lesson: What would happen if you screamed in outer space?

air	the gases that surround the Earth
eardrum	a part of the ear that vibrates to help us hear sounds
experiment	a test used to discover new information about a question
model	a pretend version of something that scientists use when the real thing is too big, small, or complicated to work with
vacuum	an empty space without any air
vibration	a quick movement back and forth
