

Mystery Science Alignment with Minnesota Science Standards

Mystery Science - Minnesota Alignment

Mystery Science aligns to the Minnesota Academic Standards in Science (2019). Each lesson (exploration & hands-on activity) is designed to take one hour. Extensions are available for each lesson and offer an opportunity for students to continue their science content learning. They include assessments and a curated collection of additional activity suggestions, online resources, project ideas, & readings.

Anchor Layer

If you are interested in anchoring phenomena or unit level projects, we suggest exploring our **Anchor Layer** feature.

You may click unit names to navigate directly to each unit's webpage, or click page numbers to jump to the corresponding page in this standards alignment document.

Animal Needs Unit (Animal Secrets)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Animal Needs: Food Why do woodpeckers peck wood?	Students obtain information through virtual observations of different animal behaviors. They use this evidence to explain that one of the basic needs of animals is food.	OL.2.1.1.3 Record and use observations to describe patterns of what plants and animals (including humans) need to survive.
Lesson 2 	Animal Needs: Shelter Read-Along Where do animals live?	Students obtain information through media about how different animal homes are built. They use this evidence to explain that animals need shelter.	OL.3.1.1.1 Develop a simple model to represent the relationship between the needs of different plants and animals (including humans) and the places they live.
Lesson 3 	Animal Needs: Safety How can you find animals in the woods?	Students obtain information through virtual observations of different animal behaviors. They use this evidence to explain that one of the basic needs of animals is shelter.	OL.2.1.1.3 Record and use observations to describe patterns of what plants and animals (including humans) need to survive.
Lesson 4 	Animals & Changing the Environment Read-Along How do animals make their homes in the forest?	Students take a nature walk to look for evidence of animal homes.	OL.3.1.1.1 Develop a simple model to represent the relationship between the needs of different plants and animals (including humans) and the places they live.

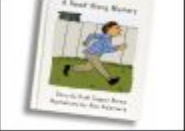

Plant Needs Unit (Plant Secrets)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1	Coming Soon!	A new lesson is in the works!	0L.2.1.1.3 Record and use observations to describe patterns of what plants and animals (including humans) need to survive.
Lesson 2 	Plant Needs: Water & Light How do plants and trees grow?	Students investigate to determine the basic needs of plants. They observe to identify ways young plants resemble the parent plant and how the plant changes as it proceeds through its life cycle.	0L.2.1.1.3 Record and use observations to describe patterns of what plants and animals (including humans) need to survive.
Lesson 3 	Animal Needs & Changing the Environment Read-Along Why would you want an old log in your backyard?	Students obtain evidence of living organisms by virtually keeping watch of a log and the living things that visit it.	0L.1.2.1.2 Make observations of plants and animals to compare the diversity of life in different habitats.

Severe Weather Unit (Wild Weather)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Severe Weather & Preparation Read-Along How can you get ready for a big storm?	Students obtain information of different types of severe weather to observe and describe how the weather changes during these events and what students can do to prepare and stay safe.	OE.1.1.1.1 Ask questions to obtain information from weather forecasts to prepare for and respond to severe weather.
Lesson 2 	Wind & Storms Have you ever watched a storm?	Students create a simple tool that allows them to observe how hard the wind is blowing. They use this tool to observe weather changes and describe the pattern of faster wind speeds right before a storm.	OE.1.1.1.1 Ask questions to obtain information from weather forecasts to prepare for and respond to severe weather.
Lesson 3 	Weather Conditions How many different kinds of weather are there?	Students obtain information through observations of the weather. They communicate the information by acting as weather watchers and creating drawings of the weather conditions.	OE.2.1.1.2 Make daily and seasonal observations of local weather conditions to describe patterns over time.

Weather Patterns Unit (Circle of Seasons)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Local Weather & Daily Patterns Read-Along How do you know what to wear for the weather?	Students track the weather daily and analyze the data by collecting, recording, and sharing their observations to observe patterns of weather changing throughout the day and from day-to-day.	OE.2.1.1.2 Make daily and seasonal observations of local weather conditions to describe patterns over time.
Lesson 2 	Seasonal Patterns What will the weather be like on your birthday?	Students evaluate information in a series of unnamed drawings of each season. They use these clues to identify characteristics of each season and describe the yearly cyclical pattern.	OE.2.1.1.2 Make daily and seasonal observations of local weather conditions to describe patterns over time.
Lesson 3 	Animals Changing Their Environment Why do birds lay eggs in the spring?	Students identify the reasons why birds lay eggs in the spring. Then, they develop a bird nest model and use this model as evidence for how animals can change the environment to meet their needs.	OE.2.1.1.2 Make daily and seasonal observations of local weather conditions to describe patterns over time.

Sunlight & Warmth Unit (Sunny Skies)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Sunlight, Heat, & Earth's Surface Read-Along How could you walk barefoot across hot pavement without burning your feet?	Students make observations of the pavement heating up after being warmed by the Sun. Then, they design a solution to build a shade structure that can reduce the warming effect of sunlight.	OP.3.2.2.1 Design and build a structure to reduce the warming effect of sunlight on Earth's surface. OP.4.2.2.1 Communicate design ideas for a structure that reduces the warming effect of sunlight on Earth's surface.
Lesson 2 	Sunlight, Warming, & Engineering How could you warm up a frozen playground?	Students carry out an investigation to test which materials can redirect the light and heat of sunlight. (*This lesson has students increase the warming effect of sunlight on an area.)	OP.3.2.2.1 Design and build a structure to reduce the warming effect of sunlight on Earth's surface.
Lesson 3 	Sunlight & Warmth Why does it get cold in winter?	Students construct an explanation for why marshmallows melt in one car and not in another car. Then, they conduct a virtual investigation to determine that the warmth of the Sun is the cause of the melted marshmallows.	OP.1.2.1.1 Collect and organize observational data to determine the effect of sunlight on Earth's surface.

Pushes & Pulls Unit (Force Olympics)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Pushes & Pulls What's the biggest excavator?	Students observe different machines and use those observations as evidence for why machines make work easier.	Foundational for OP.2.2.1.1 Identify and describe patterns that emerge from the effects of different strengths or different directions of pushes.
Lesson 2 	Pushes, Pulls, & "Work Words" Read-Along Why do builders need so many big machines?	Students observe construction equipment being used in different ways to move objects.	Foundational for OP.2.2.1.1 Identify and describe patterns that emerge from the effects of different strengths or different directions of pushes.
Lesson 3 	Motion, Speed, & Strength How can you knock down a wall made of concrete?	Students carry out an investigation to determine how far back they should pull a model wrecking ball to knock down a wall, but not the houses behind it.	OP.4.1.1.1 Construct an argument supported by evidence for whether a design solution works as intended to change the speed or direction of an object with a push or a pull.
Lesson 4 	Speed & Direction of Force Read-Along How can you knock down the most bowling pins?	Students play a game of bumper bowling to observe the way that objects can move in straight lines, zigzags, and back and forth.	OP.2.2.1.1 Identify and describe patterns that emerge from the effects of different strengths or different directions of pushes.
Lesson 5 	Direction of Motion & Engineering How can we protect a mountain town from falling rocks?	Students conduct an investigation of how to protect a town from a falling boulder. They design a solution to safely guide the direction of the boulder away from the town.	OP.4.1.1.1 Construct an argument supported by evidence for whether a design solution works as intended to change the speed or direction of an object with a push or a pull.
Lesson 6 	Forces & Engineering Read-Along How could you invent a trap?	Students define a problem they would like to solve and then design a solution using what they know about the locations of objects and how they can move.	OP.2.2.1.1 Identify and describe patterns that emerge from the effects of different strengths or different directions of pushes.

Animal Traits & Survival Unit (Animal Superpowers)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	<p>✨ New! ✨</p> <p>Parent & Offspring Traits</p> <p>How can you help a lost baby animal find its parents?</p>	<p>Students observe the traits of adult and baby animals in order to construct an explanation that most young animals are like, but not exactly like, their parents.</p>	<p>1L.1.1.1 Ask questions based on observations about the similarities and differences between young plants and animals and their parents.</p>
Lesson 2 	<p>Animal Structures & Survival</p> <p>Why do birds have beaks?</p>	<p>Students investigate how different bird beaks are well suited for eating different kinds of food. They explain which beak would help a particular bird survive in a particular environment.</p>	<p>1L.3.1.1 Develop a simple model based on evidence to represent how plants or animals use their external parts to help them survive, grow, and meet their needs.</p>
Lesson 3 	<p>Animal Behavior & Offspring Survival Read-Along</p> <p>Why do baby ducks follow their mother?</p>	<p>Students obtain information about the behaviors of animal parents that help their offspring survive.</p>	<p>1L.4.2.1.2 Obtain information using various features of texts and other media to determine patterns in the behavior of parents and offspring that help offspring survive.</p>
Lesson 4 	<p>Camouflage & Animal Survival</p> <p>Why are polar bears white?</p>	<p>Students use observations of animal parents and their offspring to construct an explanation about young plants and animals being similar, but not identical, to their parents.</p>	<p>1L.3.1.1 Develop a simple model based on evidence to represent how plants or animals use their external parts to help them survive, grow, and meet their needs.</p>
Lesson 5 	<p>Inheritance & Variation of Traits Read-Along</p> <p>Why do family members look alike?</p>	<p>Students identify parts of plants such as roots, branches, and leaves. They evaluate these plant parts and apply that information to design an umbrella that won't blow down in the wind.</p>	<p>1L.1.1.1 Ask questions based on observations about the similarities and differences between young plants and animals and their parents.</p>

Plant Traits & Survival Unit (Plant Superpowers)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1			
	Coming Soon!	A new lesson is in the works!	1L.1.1.1 Ask questions based on observations about the similarities and differences between young plants and animals and their parents.
Lesson 2			
	Plant Survival & Engineering Why don't trees blow down in the wind?	Students learn how plants respond to light. They conduct an investigation to compare how the parts of a plant respond to light.	1L.3.2.2.2 Plan and design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs.
Lesson 3			
	Plant Movement & Survival Read-Along What do sunflowers do when you're not looking?	Students learn how plants respond to light. They conduct an investigation to compare how the parts of a plant respond to light.	1L.3.1.1.1 Develop a simple model based on evidence to represent how plants or animals use their external parts to help them survive, grow, and meet their needs.

This unit is found under 2nd grade on our site, but we recommend teaching all lessons in 1st grade if you are following MN Standards.

Erosion & Earth's Surface Unit (Work of Water)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Mapping & Earth's Surface Features If you floated down a river, where would you end up?	Students develop a model of the Earth's surface and use it to discover an important principle about how rivers work: rivers flow downhill, from high places to low places.	1E.2.2.1.1 Use quantitative data to identify and describe patterns in the amount of time it takes for Earth processes to occur and determine whether they occur quickly or slowly.
Lesson 2 	Rocks, Sand, & Erosion Why is there sand at the beach?	Students investigate the effects of rocks tumbling in a river. Based on their observations, they construct an explanation for why rocks on the top of mountains are much bigger than the sand at the beach.	1E.2.2.1.1 Use quantitative data to identify and describe patterns in the amount of time it takes for Earth processes to occur and determine whether they occur quickly or slowly.
Lesson 3 	✨ New! ✨ Mapping & Severe Weather Where do flash floods happen?	Students use a model (i.e. a map) to examine the different factors, including the shapes and kinds of land, that contribute to flash floods. They use this to predict where flash floods are most likely to happen.	1E.2.2.1.1 Use quantitative data to identify and describe patterns in the amount of time it takes for Earth processes to occur and determine whether they occur quickly or slowly.
Lesson 4 	Erosion, Earth's Surface, & Landforms What's strong enough to make a canyon?	Students create a model landform and investigate how some Earth events can occur quickly, while others occur slowly.	1E.2.2.1.1 Use quantitative data to identify and describe patterns in the amount of time it takes for Earth processes to occur and determine whether they occur quickly or slowly.
Lesson 5 	Erosion & Engineering How can you stop a landslide?	Students compare multiple solutions for preventing erosion.	1E.4.1.2.1 Construct an argument with evidence to evaluate multiple solutions designed to slow or prevent wind or water from changing the shape of the land.

Light, Sound, & Communication Unit (Lights & Sounds)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Sounds & Vibrations How do they make silly sounds in cartoons?	Students explore how to make different sounds with everyday objects. They construct an explanation that objects vibrate when they make a sound, and if the vibration stops, the sound stops.	1P.2.1.1 Identify and describe patterns obtained from testing different materials and determine which materials have the properties that are best suited for producing and/or transmitting sound.
Lesson 2 	Sounds & Vibrations Read-Along Where do sounds come from?	Students create three different sound makers and construct an explanation about where the vibrations are happening in each sound experiment.	1P.1.2.1.1 Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sounds can make materials vibrate.
Lesson 3 	Although this appears next on our site, we recommend teaching this in 3rd grade if following MN Standards.		
	Light, Materials, Transparent & Opaque What if there were no windows?	Students investigate the properties of different materials that they can and cannot see through. Then they create a stained glass window using tissue paper to explore how materials interact with light.	3P.1.2.1.1 Plan and conduct a controlled investigation to determine the effect of placing objects made with different materials in the path of a beam of light.
Lesson 4 	Although this appears next on our site, we recommend teaching this in 3rd grade if following MN Standards.		
	Light & Illumination Read-Along Can you see in the dark?	Students look inside a completely dark box to determine if they can see the shape of the object inside. They allow more light into the box to illuminate the object and allow them to see it. Students use their observations explain that objects need light to be seen.	3P.1.1.1.1 Ask questions based on observations about why objects in darkness can be seen only when illuminated.
Lesson 5 	Light, Communication, & Engineering How could you send a secret message to someone far away?	Students are presented with the problem that they need to send a message at night, without using noise. They design a solution to create a color-coded message system and communicate with light signals.	1P.3.2.2.1 Design and build a device that uses light or sound to solve the problem of communicating over a distance.
Lesson 6 	Lights, Sounds, & Communication Read-Along How do boats find their way in the fog?	Students obtain information about light and sound signals. They analyze different sounds with eyes closed to determine which type of sound they hear.	1P.3.2.2.1 Design and build a device that uses light or sound to solve the problem of communicating over a distance.

Animal Biodiversity Unit (Animal Adventures)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Biodiversity & Classification How many different kinds of animals are there?	Students observe the traits of different animals and use that information to organize them into groups based on their characteristics.	Foundational for 2L.4.1.1.1 Construct an argument with evidence that evaluates how in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all.
Lesson 2 	✨ New! ✨ Habitat Diversity Why would a wild animal visit a playground?	Students observe animals, plants, and the physical characteristics of two different habitats. They collect and analyze data to compare the biodiversity between the two habitats.	2L.4.1.1.1 Construct an argument with evidence that evaluates how in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all.
Lesson 3 	Biodiversity, Habitats, & Species Why do frogs say “ribbit”?	Students identify frogs based on their unique calls and use that information to determine the level of frog species diversity within multiple habitats.	2L.4.1.1.1 Construct an argument with evidence that evaluates how in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all.
Lesson 4 	Biodiversity & Engineering How could you get more birds to visit a bird feeder?	Students investigate which kinds of birds are likely to visit a bird feeder based on what they eat and design and build a prototype bird feeder that attracts a specific type of bird.	2L.4.1.1.1 Construct an argument with evidence that evaluates how in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all.

Plant Adaptations Unit (Plant Adventures)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Seed Dispersal How did a tree travel halfway around the world?	Students observe how different types of plants produce different types of seeds in the process of reproduction.	2L.3.2.2.1 Engineer a device that mimics the structures and functions of plants or animals in seed dispersal.
Lesson 2 	Although this appears on our site, we recommend teaching this in 3rd grade if following MN Standards.		
	Water, Sunlight, & Plant Growth Could a plant survive without light?	Students conduct an investigation to determine that plants need water and light to grow.	3L.1.2.1.2 Plan and conduct an investigation to determine how amounts of sunlight and water impact the growth of a plant.
Lesson 3 	Although this appears on our site, we recommend teaching this in 3rd grade if following MN Standards.		
	Light, Leaves, & Competition Why do trees grow so tall?	Students observe that plants require light in order to fully grow and be healthy.	3L.1.2.1.2 Plan and conduct an investigation to determine how amounts of sunlight and water impact the growth of a plant.
Lesson 4 	Although this appears on our site, we recommend teaching this in 3rd grade if following MN Standards.		
	Adaptations & Habitat Should you water a cactus?	Students observe that different plants require different amounts of light and water.	3L.1.2.1.2 Plan and conduct an investigation to determine how amounts of sunlight and water impact the growth of a plant.
Lesson 5 	Although this appears on our site, we recommend teaching this in 3rd grade if following MN Standards.		
	Adaptations & Habitat Where do plants grow best?	Students practice thinking like gardeners, considering what plants need and how a simple habitat can change over time.	3L.1.2.1.2 Plan and conduct an investigation to determine how amounts of sunlight and water impact the growth of a plant.

This unit is found under 3rd grade on our site, but we recommend teaching all lessons in 2nd grade if you are following MN Standards.

Weather & Climate Unit (Stormy Skies)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Water Cycle & Phases of Matter Where do clouds come from?	Students obtain and combine information that water can change from liquid to gas, but that it is always made of tiny drops. Clouds are made of water that has evaporated.	2E.4.2.1.1 Obtain and use information from multiple sources to identify where water is found on Earth.
Lesson 2 	Local Weather Patterns & Weather Prediction How can we predict when it's going to storm?	Students make observations of clouds and develop a tool to make predictions about what kind of weather might happen next.	2E.2.1.1.1 Represent data to describe typical weather conditions expected during a particular season.
Lesson 3 	✨ New ✨ Seasonal Weather Patterns Where's the best place to build a snow fort?	Students gather winter temperature data from three different towns. They represent the data in a table to compare the weather and decide which town is the best candidate to host a snow fort festival in future years.	2E.2.1.1.1 Represent data to describe typical weather conditions expected during a particular season.
Lesson 4 	Climate, Geography, & Global Weather Patterns Why are some places always hot?	Students obtain and combine information to describe the different climate regions of the world.	2E.4.2.1.2 Obtain and use information from multiple sources, including electronic sources, to describe climates in different regions of the world.
Lesson 5 	Natural Hazards & Engineering How can you keep a house from blowing away in a windstorm?	Students design and build solutions that reduce the hazards associated with strong winds that could damage buildings.	2E.2.1.1.2 Analyze data from tests of objects designed to reduce the impacts of weather-related hazards and compare the strengths and weaknesses of how each performs.

Material Properties Unit (Material Magic)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Materials, Properties, & Engineering Why do we wear clothes?	Students investigate different material properties, such as flexibility and absorbency, and use those properties to design and build a hat that protects them from the sun.	2P.1.2.1.1 Plan and conduct an investigation to describe how heating and cooling affects different kinds of materials based upon their observable properties.
Lesson 2 	Classify Materials, Insulators, and Properties Can you really fry an egg on a hot sidewalk?	Students conduct an investigation of conductors and insulators in order to determine which are best suited for allowing people to handle hot items.	2P.1.2.1.1 Plan and conduct an investigation to describe how heating and cooling affects different kinds of materials based upon their observable properties.
Lesson 3 	Heating, Cooling, & Phases of Matter Why are so many toys made out of plastic?	Student conduct an investigation of different materials in order to determine which are most and least easily melted.	2P.3.1.1.1 Develop a simple diagram or physical model to illustrate how some changes caused by heating or cooling can be reversed and some cannot.
Lesson 4 	Inventions & Engineering What materials might be invented in the future?	Students design a new invention that takes advantage of the unique properties of a futuristic material.	2P.1.2.1.1 Plan and conduct an investigation to describe how heating and cooling affects different kinds of materials based upon their observable properties.
Lesson 5 	Materials, Properties, & Engineering Could you build a house out of paper?	Students construct an evidence- based account of how a structure built of paper can be disassembled and rebuilt in new ways.	2P.1.2.1.1 Plan and conduct an investigation to describe how heating and cooling affects different kinds of materials based upon their observable properties.
Lesson 6 	✨ New ✨ Soil Properties How do you build a city out of mud?	Students conduct an investigation where they examine three different soil models. They use this information to determine which type of soil has the properties that will result in the best mud that can be used to build a house.	2P.1.2.1.1 Plan and conduct an investigation to describe how heating and cooling affects different kinds of materials based upon their observable properties.

This unit is found under 3rd grade on our site, but we recommend teaching many of its lessons in 2nd grade if you are following MN Standards.

Forces, Motion, & Magnets Unit (Invisible Forces)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Balanced & Unbalanced Forces How could you win a tug-of-war against a bunch of adults?	Students develop a mental model of the nature of forces and motion and use that model to explain the behavior of an elastic jumper.	2P.2.2.1 Identify and predict quantitative patterns of the effects of balanced and unbalanced forces on the motion or an object.
Lesson 2 	Balanced Forces & Engineering What makes bridges so strong?	Students develop and design a bridge to be as strong as possible while working with limited materials.	Foundational for 2P.2.2.1 Identify and predict quantitative patterns of the effects of balanced and unbalanced forces on the motion or an object.
Lesson 3 	Friction & Pattern of Motion How can you go faster down a slide?	Students plan and carry out investigations of the behaviors of different materials as they slide past one another.	2P.1.1.1 Ask questions about an object's motion based on observation, that can be answered by an investigation.
Lesson 4 	<p>Although this appears next on our site, we recommend teaching this in 4th grade if following MN Standards.</p> Magnets & Forces What can magnets do?	Students investigate the properties of magnets and the fact that they exert forces that act at a distance.	4P.1.1.1 Ask questions to determine cause and effect relationships of electric and magnetic interactions between two objects not in contact with each other.
Lesson 5 	<p>Although this appears next on our site, we recommend teaching this in 4th grade if following MN Standards.</p> Magnets & Engineering How can you unlock a door using a magnet?	Students investigate magnetic attraction and repulsion, and design a magnetic lock in the hands-on activity.	4P.1.1.2 Define a simple design problem that can be solved by applying scientific ideas about magnets.

This unit is found under 2nd grade on our site, but we recommend teaching many of its lessons in 3rd grade if you are following MN Standards.

Plant Adaptations Unit (Plant Adventures)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	<p>Although this appears on our site, we recommend teaching this in 2nd grade if following MN Standards.</p> <p>Seed Dispersal</p> <p>How did a tree travel halfway around the world?</p>	<p>Students observe how different types of plants produce different types of seeds in the process of reproduction.</p>	<p>2L.3.2.2.1 Engineer a device that mimics the structures and functions of plants or animals in seed dispersal.</p>
Lesson 2 	<p>Water, Sunlight, & Plant Growth</p> <p>Could a plant survive without light?</p>	<p>Students conduct an investigation to determine that plants need water and light to grow.</p>	<p>3L.1.2.1.2 Plan and conduct an investigation to determine how amounts of sunlight and water impact the growth of a plant.</p>
Lesson 3 	<p>Light, Leaves, & Competition</p> <p>Why do trees grow so tall?</p>	<p>Students observe that plants require light in order to fully grow and be healthy.</p>	<p>3L.1.2.1.2 Plan and conduct an investigation to determine how amounts of sunlight and water impact the growth of a plant.</p>
Lesson 4 	<p>Adaptations & Habitat</p> <p>Should you water a cactus?</p>	<p>Students observe that different plants require different amounts of light and water.</p>	<p>3L.1.2.1.2 Plan and conduct an investigation to determine how amounts of sunlight and water impact the growth of a plant.</p>
Lesson 5 	<p>Adaptations & Habitat</p> <p>Where do plants grow best?</p>	<p>Students practice thinking like gardeners, considering what plants need and how a simple habitat can change over time.</p>	<p>3L.1.2.1.2 Plan and conduct an investigation to determine how amounts of sunlight and water impact the growth of a plant.</p>

Life Cycles Unit (Circle of Life)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	<p>✨ New ✨</p> <p>Animal Life Cycles</p> <p>How is your life like an alligator's life?</p>	<p>Students create models of several different animal life cycles and compare them to one another. They use these models to discover the pattern that all animals are born, grow, can have babies, and eventually die.</p>	<p>3L.3.1.1.2 Develop multiple models to describe how organisms have unique and diverse life cycles but all have birth, growth, reproduction, and death in common.</p>
Lesson 2 	<p>Environmental Change & Engineering</p> <p>What's the best way to get rid of mosquitoes?</p>	<p>Students obtain and evaluate information about mosquitoes from different sources. They analyze and interpret information about the mosquito life cycle to reduce the number of mosquitoes that live in a certain area.</p>	<p>3L.4.1.1.1 Construct an argument about strategies animals use to survive.</p>
Lesson 3 	<p>✨ New ✨</p> <p>Plant Life Cycles</p> <p>Why are there so many different kinds of flowers?</p>	<p>Students play a game that models the stages of the plant life cycle. After playing the game students use the model to show how changes to one part of the life cycle affect all other stages.</p>	<p>3L.3.1.1.2 Develop multiple models to describe how organisms have unique and diverse life cycles but all have birth, growth, reproduction, and death in common.</p>

Plant Life Cycle & Heredity Unit (Power of Flowers)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Pollination & Plant Reproduction Why do plants grow flowers?	Students model the structure and function of flower parts that are responsible for creating seeds.	3L.3.1.1.2 Develop multiple models to describe how organisms have unique and diverse life cycles but all have birth, growth, reproduction, and death in common.
Lesson 2 	Seed Dispersal & Plant Life Cycle Why do plants give us fruit?	Students explore the function of fruits in plants and practice classification.	3L.3.1.1.2 Develop multiple models to describe how organisms have unique and diverse life cycles but all have birth, growth, reproduction, and death in common.
Lesson 3 	Trait Variation, Inheritance, & Artificial Selection Why are some apples red and some green?	Students explore how human beings have developed fruits with specific traits through selection.	3L.3.2.1.1 Construct an explanation using evidence from various sources for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing.
Lesson 4 	Trait Variation, Inheritance, & Artificial Selection How could you make the biggest fruit in the world?	Students investigate how human beings have modified plants based on our knowledge of how plants change from generation to generation.	3L.3.2.1.1 Construct an explanation using evidence from various sources for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing.

This unit is found under 4th grade on our site, but we recommend teaching all lessons in 3rd grade if you are following MN Standards.

Human Body, Vision, & The Brain Unit (Human Machine)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Muscles & Skeleton Why do your biceps bulge?	Students construct a model of the human hand to explain how muscles pull on bones to create movement.	3L.4.2.1.1 Obtain information from various types of media to support an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction.
Lesson 2 	Light, Eyes, & Vision What do people who are blind see?	Students develop a working model of an eye. They use the model to reason about how light reflects off an object and into the eye, helping an organism process information from the environment.	3P.3.1.1.1 Develop a model to describe that light reflecting from objects and entering the eye allows objects to be seen.
Lesson 3 	Structure & Function of Eyes How can some animals see in the dark?	Students use their eye model to discover that the pupil controls the amount of light let into the eye. In the dark, pupils get larger to let in more light.	3P.3.1.1.1 Develop a model to describe that light reflecting from objects and entering the eye allows objects to be seen.
Lesson 4 	Brain, Nerves, & Information Processing How does your brain control your body?	Students investigate how their own brain works by testing their reflexes. They discover that the brain receives information from the senses, processes the information, and sends signals to the muscles to enable movement.	3L.4.2.1.1 Obtain information from various types of media to support an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction.

This unit is found under 1st grade on our site, but we recommend teaching all lessons in 3rd grade if you are following MN Standards.

Day Patterns Unit (Sun & Shadows)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Sun, Shadows, & Daily Patterns Could a statue's shadow move?	Students observe how shadows change as time passes, or as the Sun moves across the sky. They analyze how to move a light source to change the shape and direction of shadows, constructing an explanation of what causes a shadow to move.	3E.2.1.1 Record observations of the sun, moon, and stars and use them to describe patterns that can be predicted.
Lesson 2 	Sun, Shadows, & Daily Patterns Read-Along What does your shadow do when you're not looking?	Students conduct an investigation to gather information about how their shadow changes throughout the day.	3E.2.1.1 Record observations of the sun, moon, and stars and use them to describe patterns that can be predicted.
Lesson 3 	Sun & Daily Patterns How can the Sun help you if you're lost?	Students develop a Sun Finder, a model of the Sun's movement across the sky. They use this model to reason about how the Sun can help guide them during the day.	3E.2.1.1 Record observations of the sun, moon, and stars and use them to describe patterns that can be predicted.
Lesson 4 	Daylight & Seasonal Patterns Read-Along Why do you have to go to bed early in the summer?	Students obtain information about the seasonal patterns of sunrise and sunset.	3E.2.2.1 Organize and electronically present collected data to identify and describe patterns in the amount of daylight in the different times of the year.

This unit is found under 1st grade on our site, but we recommend teaching all lessons in 3rd grade if you are following MN Standards.

Night Patterns Unit (Moon & Stars)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	<p>💡 New! 💡</p> <p>Moon Phases & Patterns</p> <p>When can you see the full moon?</p>	<p>Students record observations of the Moon's shape using a series of photos collected over the course of four weeks. Using this information, students discover that the Moon follows a cyclical pattern, which they can use to predict when a full moon will appear.</p>	<p>3E.2.1.1.1 Record observations of the sun, moon, and stars and use them to describe patterns that can be predicted.</p>
Lesson 2 	<p>Stars & Daily Patterns</p> <p>Why do stars come out at night?</p>	<p>Students develop and use a model of the Big Dipper in the night sky. After conducting a simple investigation, students construct an explanation for why stars are only visible in the night sky.</p>	<p>3E.2.1.1.1 Record observations of the sun, moon, and stars and use them to describe patterns that can be predicted.</p>
Lesson 3 	<p>Stars & Seasonal Patterns Read-Along</p> <p>How can stars help you if you get lost?</p>	<p>Students observe that groups of stars in the sky form a pattern: constellations. Even though the Big Dipper changes its spot in the sky in different seasons, it always points to the North Star.</p>	<p>3E.2.1.1.1 Record observations of the sun, moon, and stars and use them to describe patterns that can be predicted.</p>

This unit is found under 1st grade on our site, but we recommend teaching many of its lessons in 3rd grade if you are following MN Standards.

Light, Sound, & Communication Unit (Lights & Sounds)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Although this appears on our site, we recommend teaching this in 1st grade if following MN Standards.		
Lesson 2 	Sounds & Vibrations How do they make silly sounds in cartoons?	Students explore how to make different sounds with everyday objects. They construct an explanation that objects vibrate when they make a sound, and if the vibration stops, the sound stops.	1P.2.1.1 Identify and describe patterns obtained from testing different materials and determine which materials have the properties that are best suited for producing and/or transmitting sound.
Lesson 3 	Sounds & Vibrations Read-Along Where do sounds come from?	Students create three different sound makers and construct an explanation about where the vibrations are happening in each sound experiment.	1P.1.2.1.1 Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sounds can make materials vibrate.
Lesson 4 	Light, Materials, Transparent & Opaque What if there were no windows?	Students investigate the properties of different materials that they can and cannot see through. Then they create a stained glass window using tissue paper to explore how materials interact with light.	3P.1.2.1.1 Plan and conduct a controlled investigation to determine the effect of placing objects made with different materials in the path of a beam of light.
Lesson 5 	Light & Illumination Read-Along Can you see in the dark?	Students look inside a completely dark box to determine if they can see the shape of the object inside. They allow more light into the box to illuminate the object and allow them to see it. Students use their observations explain that objects need light to be seen.	3P.1.1.1.1 Ask questions based on observations about why objects in darkness can be seen only when illuminated.
Lesson 6 	Although this appears next on our site, we recommend teaching this in 1st grade if following MN Standards.		
Lesson 7 	Light, Communication, & Engineering How could you send a secret message to someone far away?	Students are presented with the problem that they need to send a message at night, without using noise. They design a solution to create a color-coded message system and communicate with light signals.	1P.3.2.2.1 Design and build a device that uses light or sound to solve the problem of communicating over a distance.
Lesson 8 	Lights, Sounds, & Communication, Read-Along How do boats find their way in the fog?	Students obtain information about light and sound signals. They analyze different sounds with eyes closed to determine which type of sound they hear.	1P.3.2.2.1 Design and build a device that uses light or sound to solve the problem of communicating over a distance.

This unit is found under 3rd grade on our site, but we recommend teaching all lessons in 4th grade if you are following MN Standards.

Fossils, Animal Survival, & Heredity Unit (Animals Through Time)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Habitats, Fossils, & Environments Over Time Where can you find whales in a desert?	Students explore the idea that the rock under our feet sometimes contains fossils, and investigate how these fossils reveal changes in habitats through time.	4L.4.1.1 Construct or support an argument that traits can be influenced by different environments.
Lesson 2 	Fossil Evidence & Classification How do we know what dinosaurs looked like?	Students learn how we can infer what the outside of an animal looked like by using clues about their skeleton.	4L.4.2.1.2 Obtain information from various media sources to determine that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.
Lesson 3 	Fossil Evidence, Trace Fossils, & Animal Behavior Can you outrun a dinosaur?	Students learn how fossilized animal tracks can tell us a great deal about the animals that left them.	4L.4.2.1.2 Obtain information from various media sources to determine that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.
Lesson 4 	Trait Variation, Inheritance, & Artificial Selection What kinds of animals might there be in the future?	Students analyze the traits of parent dogs and their offspring, constructing an explanation about which traits a puppy gets from each parent.	4L.4.2.1.2 Obtain information from various media sources to determine that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.

Fossils, Animal Survival, & Heredity Unit continues on the next page

This unit is found under 3rd grade on our site, but we recommend teaching all lessons in 4th grade if you are following MN Standards.

Fossils, Animal Survival, & Heredity Unit (Animals Through Time)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 5 	Trait Variation, Natural Selection, & Survival Can selection happen without people?	Students compare the structures of lizards that live on an island. They simulate multiple generations of these lizards, and analyze and interpret the data to understand how these structures aid in their survival.	4L.4.2.1.2 Obtain information from various media sources to determine that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.
Lesson 6 	Animal Groups & Survival Why do dogs wag their tails?	Students observe animals that live in groups in order to obtain, evaluate, and communicate information about animal social behavior. Students use evidence to show how animals form groups to help them survive.	4L.4.2.1.2 Obtain information from various media sources to determine that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.
Lesson 7 	Traits & Environmental Variation How long can people (and animals) survive in outer space?	Students measure and compare their own physical traits (arm strength, balance, and height) and analyze the information to construct an explanation for how the environment can influence traits.	4L.4.1.1.1 Construct or support an argument that traits can be influenced by different environments.

Earth's Features & Processes Unit (The Birth of Rocks)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Volcanoes & Patterns of Earth's Features Could a volcano pop up where you live?	Students use coordinates to develop a map of volcanoes to discover a pattern of where volcanoes exist on Earth. Students identify the pattern of volcanoes in the "Ring of Fire."	4E.3.2.1.1 Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in landscape over time.
Lesson 2 	Volcanoes & Rock Cycle Why do some volcanoes explode?	Students investigate the properties of thin and thick lava by attempting to create air bubbles. Students realize that thick lava will cause a volcano to explode, while thin lava will not.	4E.3.2.1.1 Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in landscape over time.
Lesson 3 	Weathering & Erosion Will a mountain last forever?	Students make observations of the effects of weathering to discover that rocks will become rounded and break into small pieces when they tumble down a mountain.	4E.1.2.1.1 Make observations and measurements to provide evidence of the effects of weathering or the rate of erosion by the forces of water, ice, wind, or vegetation.
Lesson 4 	✨ New ✨ Sedimentary Rock & Fossils What did your town look like 100 million years ago?	Students create a model canyon and use the pattern of fossils found in each rock layer to support the explanation that the landscape has changed many times over millions of years.	4E.3.2.1.1 Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in landscape over time.
Lesson 5 	Erosion, Natural Hazards, & Engineering How could you survive a landslide?	Students generate multiple possible solutions to protect homes from a landslide. Students realize that there are many causes for the erosion that causes rocks to fall in landslides.	4E.1.2.1.2 Plan and carry out fair tests in which variables are controlled and failure points are considered to improve a model or prototype to prevent erosion. 4E.3.2.2.1 Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans.

This unit is found under 5th grade on our site, but we recommend teaching many of its lessons in 4th grade if you are following MN Standards.

Water Cycle & Earth's Systems Unit (Watery Planet)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Hydrosphere & The Roles of Water How much water is in the world?	Students analyze and interpret data from world maps to determine the relative amounts of fresh, salt, and frozen water. Students figure out that while the Earth has a lot of water, most of Earth's water is not fresh or accessible.	4E.2.2.1 Interpret charts, maps, and/or graphs of the amounts of salt water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.
Lesson 2 	<p>Although this appears next on our site, we recommend teaching this in 5th grade if following MN Standards.</p> <p>✨New!✨</p> Mixtures & Solutions How much salt is in the ocean?	<i>observe how salt seems to completely vanish when dissolved in water. Students measure and graph quantities to provide evidence that the salt is still in the solution, even though we can't see it.</i>	5P.2.2.1.1 Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved.
Lesson 3 	Groundwater as a Natural Resource When you turn on the faucet, where does the water come from?	Students learn most people get fresh water from underground sources. Students determine the best place to settle a town by considering features of the landscape & the characteristics of the plants that thrive there.	4E.2.2.1 Interpret charts, maps, and/or graphs of the amounts of salt water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.
Lesson 4 	Water Cycle Can we make it rain?	Students create a model of the ocean and sky to investigate how temperature influences evaporation and condensation. Students figure out that higher ocean temperatures lead to more evaporation, thus leading to more rain.	4E.3.1.1.1 Develop a model based in part on student observations or data to describe ways the geosphere, biosphere, hydrosphere, and atmosphere interact. 4E.1.1.2 Ask questions about how water moves through the Earth system and identify the type of question.
Lesson 5 	Natural Disasters & Engineering How can you save a town from a hurricane?	Students define the problem that a town needs protection from flooding. They design solutions using different types of flood protection. They realize flooding is caused by severe rainfall generated by hurricanes. Hurricanes are created where ocean temperatures are warm.	4E.3.2.2.1 Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans.

Energy, Energy Transfer, & Electricity Unit (Energizing Everything)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 5 	<p>Although this appears on our site, we recommend teaching this in 5th grade if following MN Standards.</p> <p>Energy Transfer & Engineering</p> <p>Can you build a chain reaction machine?</p>	<p>Students continue to build a chain reaction machine – identifying a goal, brainstorming and testing multiple ideas, and determining an optimal solution. The chain reaction machine uses multiple components to transfer energy from one part to the next.</p>	<p>5P.1.1.1 Ask investigatable questions and predict reasonable outcomes about the changes in energy, related to speed, that occur when objects interact.</p>
Lesson 6 	<p>Although this appears on our site, we recommend teaching this in 5th grade if following MN Standards.</p> <p>Electrical Energy</p> <p>What if there were no electricity?</p>	<p>Students design a flashlight with an on/off switch, using batteries, flights, and tin foil. Students figure out that electricity can be transformed to other forms of energy, such as movement, light, and heat.</p>	<p>5P.2.1.1.1 Analyze and interpret data to show that energy can be transferred from place to place by sound, light, heat, and electric currents.</p>
Lesson 7 	<p>Although this appears on our site, we recommend teaching this in 5th grade if following MN Standards.</p> <p>Heat Energy & Energy Transfer</p> <p>How long did it take to travel across the country before cars and planes?</p>	<p>Students build a paper spinner and conduct an investigation to explain how heat makes things move. Students realize that heat energy can be transformed into motion energy using a turbine.</p>	<p>5P.2.1.1.1 Analyze and interpret data to show that energy can be transferred from place to place by sound, light, heat, and electric currents.</p> <p>5P.3.2.2.1 Apply scientific ideas to design, test, and refine a device that converts energy from one form to another.</p>
Lesson 8 	<p>Renewable Energy & Natural Resources</p> <p>Where does energy come from?</p>	<p>Students evaluate the advantages and disadvantages of wind, water, and solar energy to power a town. Students obtain and evaluate information about the needs of each source of energy and analyze and interpret data about the town's resources.</p>	<p>4E.4.2.1.1 Read and comprehend grade appropriate complex texts and/or other reliable media to describe that energy and fuels are derived from natural resources and their uses affect the environment.</p>

This unit is found under 3rd grade on our site, but we recommend teaching many of its lessons in 4th grade if you are following MN Standards.

Forces, Motion, & Magnets Unit (Invisible Forces)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	<p>Although this appears on our site, we recommend teaching this in 2nd grade if following MN Standards.</p> <p>Balanced & Unbalanced Forces</p> <p>How could you win a tug-of-war against a bunch of adults?</p>	<p>Students develop a mental model of the nature of forces and motion and use that model to explain the behavior of an elastic jumper.</p>	<p>2P.2.2.1 Identify and predict quantitative patterns of the effects of balanced and unbalanced forces on the motion or an object.</p>
Lesson 2 	<p>Although this appears next on our site, we recommend teaching this in 2nd grade if following MN Standards.</p> <p>Balanced Forces & Engineering</p> <p>What makes bridges so strong?</p>	<p>Students develop and design a bridge to be as strong as possible while working with limited materials.</p>	<p>Foundational for 2P.2.2.1 Identify and predict quantitative patterns of the effects of balanced and unbalanced forces on the motion or an object.</p>
Lesson 3 	<p>Although this appears next on our site, we recommend teaching this in 2nd grade if following MN Standards.</p> <p>Friction & Pattern of Motion</p> <p>How can you go faster down a slide?</p>	<p>Students plan and carry out investigations of the behaviors of different materials as they slide past one another.</p>	<p>2P.1.1.1 Ask questions about an object's motion based on observation, that can be answered by an investigation.</p>
Lesson 4 	<p>Magnets & Forces</p> <p>What can magnets do?</p>	<p>Students investigate the properties of magnets and the fact that they exert forces that act at a distance.</p>	<p>4P.1.1.1 Ask questions to determine cause and effect relationships of electric and magnetic interactions between two objects not in contact with each other.</p>
Lesson 5 	<p>Magnets & Engineering</p> <p>How can you unlock a door using a magnet?</p>	<p>Students investigate magnetic attraction and repulsion, and design a magnetic lock in the hands-on activity.</p>	<p>4P.1.1.2 Define a simple design problem that can be solved by applying scientific ideas about magnets.</p>

Ecosystems & The Food Web Unit (Web of Life)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Food Chains, Predators, Herbivores & Carnivores Why would a hawk move to New York City?	Students construct models of food chains by linking cards discovering that different interrelationships exist between organisms.	5P.3.1.1.2 Use models to describe that energy in animals' food (used for body repair, growth, and motion and to maintain body warmth) was once energy from the sun.
Lesson 2 	Plant Needs: Air & Water What do plants eat?	Students conduct an investigation and interpret data and figure out that water and air account for a plant's weight.	5L.1.2.1.4 Plan and conduct an investigation to obtain evidence that plants get the materials they need for growth chiefly from air and water.
Lesson 3 	Decomposers & Matter Cycle Where do fallen leaves go?	Students conduct an investigation to test how mold grows under different conditions to decompose food. Students realize that decomposers, like mold, break down and consume dead plant material.	5L.3.1.1.3 Create an electronic visualization of the movement of matter among plants, animals, decomposers, and the environment.
Lesson 4 	Decomposers, Nutrients, & Matter Cycle Do worms really eat dirt?	Students make observations of worms to realize that worms act as decomposers to eat dead matter in an ecosystem and cycle nutrients into the soil.	5L.3.1.1.3 Create an electronic visualization of the movement of matter among plants, animals, decomposers, and the environment.
Lesson 5 	Ecosystems & Matter Cycle Why do you have to clean a fish tank but not a pond?	Students develop a model of a pond ecosystem and realize that interrelationships exist between decomposers, plants, and animals. Students discover that each organism must be in balance for the pond ecosystem to function.	5L.4.1.2.1 Evaluate the merit of a solution to a problem caused by changes in plant and animal populations as a result of environmental changes.
Lesson 6 	Food Webs & Flow of Energy Why did the dinosaurs go extinct?	Students develop a model of a dinosaur food web. Students realize that blocking the sun's energy would have disastrous effects on the organisms that rely on this energy in the food web and cause the extinction of some entire species.	5P.3.1.1.2 Use models to describe that energy in animals' food (used for body repair, growth, and motion and to maintain body warmth) was once energy from the sun.

Stars & The Solar System Unit (Spaceship Earth)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Day, Night, & Earth's Rotation How fast does the Earth spin?	Students model the rotation of the Earth and investigate why the Sun looks like it's moving across the sky. Using evidence they gathered in the investigation, students build a model that explains how the Earth's rotation around its own axis causes the Sun to appear to rise and set.	5E.2.2.1.2 Use data to describe patterns in the daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.
Lesson 2 	Earth's Rotation & Daily Shadow Patterns Who set the first clock?	Students make a shadow clock (sundial) and investigate how the direction and length of shadows change with the position of the light shining on the sundial. Students realize that the Sun's position in the sky can be used to tell the time of day.	5E.2.2.1.2 Use data to describe patterns in the daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.
Lesson 3 	Seasonal Changes & Shadow Length How can the Sun tell you the season?	Students examine photos taken at different times of year and figure out the time of year that each photo was taken. Students discover that the Sun's path changes with the seasons, as does the time of sunrise and sunset. The Sun is always highest in the sky at noon, but that height changes with the season.	5E.2.2.1.2 Use data to describe patterns in the daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.
Lesson 4 	Seasonal Patterns & Earth's Orbit Why do the stars change with the seasons?	Students build a model of the universe and use it to explain why different stars are visible at different times of year. Using evidence from this model, students make an argument that supports the claim that the Earth orbits the Sun.	5E.2.2.1.2 Use data to describe patterns in the daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.

Stars & The Solar System Unit continues on the next page

Stars & The Solar System Unit (Spaceship Earth)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 5 	Moon Phases, Lunar Cycle Why does the Moon change shape?	Students use a physical model of the Sun and Moon to investigate how the Moon's phase relates to its position relative to the Sun. Students notice that the Moon's phases repeat in a predictable pattern.	5E.2.2.1.2 Use data to describe patterns in the daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.
Lesson 6 	Planets & Solar System What are the wandering stars?	Students learn that planets look like stars, but don't move like them. The apparent movement of planets is caused by both the Earth's spin and the planets' movement around the Sun. Students use a model of the solar system to learn the order of the planets and their relative distance from the Sun, and each other.	5E.2.2.1.2 Use data to describe patterns in the daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.
Lesson 7 	Gravity Why is gravity different on other planets?	Using mathematics and computational thinking, students calculate how high they could jump on planets and moons that have stronger or weaker gravity than Earth. Students analyze and interpret this data to construct an explanation for why the amount of gravity is different on other planets.	5E.2.2.1.2 Use data to describe patterns in the daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.
Lesson 8 	Star Brightness & Habitable Planets Could there be life on other planets?	Students discover that the Earth is in the "Goldilocks Zone" — a distance from the Sun with the right amount of light and heat for life to exist. Students evaluate other solar systems, comparing their stars to our Sun. Based on their analysis, students plan a space mission to a planet with conditions similar to those on Earth.	5E.4.1.1.1 Use evidence to support an argument that the apparent brightness of the sun and stars is due to their relative distances from Earth.

This unit is found under 4th grade on our site, but we recommend teaching many of its lessons in 5th grade if you are following MN Standards.

Energy, Energy Transfer, & Electricity Unit (Energizing Everything)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Speed & Energy How is your body similar to a car?	Students learn about stored energy and about the relationship between motion and energy. Students build models of an amusement park ride and discover how energy can be stored in materials. Stored energy can be converted to speed.	5P.3.2.1.1 Construct an explanation based on evidence relating the speed of an object to the energy of that object.
Lesson 2 	Collisions & Energy Transfer What makes roller coasters go so fast?	Students build a model of a roller coaster and carry out an investigation using marbles. Students learn that lifting an object up stores energy in the object. When the object falls, that stored energy is released. They realize that energy is transferred when objects collide.	5P.1.1.1.1 Ask investigatable questions and predict reasonable outcomes about the changes in energy, related to speed, that occur when objects interact.
Lesson 3 	Energy Transfer & Engineering Why is the first hill of a roller coaster always the highest?	Using a model roller coaster, students conduct an investigation to determine that a hill's height determines the amount of energy stored in a marble at the top of the hill. Students figure out that the greater the height of an object, the more energy it stores and the faster it will move when released or dropped.	5P.1.1.1.1 Ask investigatable questions and predict reasonable outcomes about the changes in energy, related to speed, that occur when objects interact.
Lesson 4 	Energy Transfer & Engineering Could you knock down a building using only dominoes?	Students experiment with ways to store and release energy, creating the beginning of a chain reaction machine with a lever and a ramp. Students figure out that a domino standing on end is storing energy, only requiring a small amount of energy (a tiny push) to release the stored energy.	5P.1.1.1.1 Ask investigatable questions and predict reasonable outcomes about the changes in energy, related to speed, that occur when objects interact.

Energy, Energy Transfer, & Electricity Unit continues on the next page

This unit is found under 4th grade on our site, but we recommend teaching many of its lessons in 5th grade if you are following MN Standards.

Energy, Energy Transfer, & Electricity Unit (Energizing Everything)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 5 	Energy Transfer & Engineering Can you build a chain reaction machine?	Students continue to build a chain reaction machine – identifying a goal, brainstorming and testing multiple ideas, and determining an optimal solution. The chain reaction machine uses multiple components to transfer energy from one part to the next.	5P.1.1.1 Ask investigatable questions and predict reasonable outcomes about the changes in energy, related to speed, that occur when objects interact.
Lesson 6 	Electrical Energy What if there were no electricity?	Students design a flashlight with an on/off switch, using batteries, flights, and tin foil. Students figure out that electricity can be transformed to other forms of energy, such as movement, light, and heat.	5P.2.1.1.1 Analyze and interpret data to show that energy can be transferred from place to place by sound, light, heat, and electric currents.
Lesson 7 	Heat Energy & Energy Transfer How long did it take to travel across the country before cars and planes?	Students build a paper spinner and conduct an investigation to explain how heat makes things move. Students realize that heat energy can be transformed into motion energy using a turbine.	5P.2.1.1.1 Analyze and interpret data to show that energy can be transferred from place to place by sound, light, heat, and electric currents. 5P.3.2.2.1 Apply scientific ideas to design, test, and refine a device that converts energy from one form to another.
Lesson 8 	Renewable Energy & Natural Resources Where does energy come from?	Students evaluate the advantages and disadvantages of wind, water, and solar energy to power a town. Students obtain and evaluate information about the needs of each source of energy and analyze and interpret data about the town's resources.	4E.4.2.1.1 Read and comprehend grade appropriate complex texts and/or other reliable media to describe that energy and fuels are derived from natural resources and their uses affect the environment.

*Although this appears next on our site, we **recommend teaching this in 4th grade** if following MN Standards.*

This unit is found under 4th grade on our site, but we recommend teaching all lessons in 5th grade if you are following MN Standards.

Sound, Waves, & Communication Unit (Waves of Sound)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Sound, Vibration, & Engineering How far can a whisper travel?	Students investigate sound energy using paper cup telephones. Students figure out that sound is a vibration that can travel through a medium.	5P.2.1.1.1 Analyze and interpret data to show that energy can be transferred from place to place by sound, light, heat, and electric currents.
Lesson 2 	Sound & Vibrations What would happen if you screamed in outer space?	Students construct a model of sound vibrations to explain how air is a medium that sound vibrations travel through.	5P.2.1.1.1 Analyze and interpret data to show that energy can be transferred from place to place by sound, light, heat, and electric currents.
Lesson 3 	Sound Waves & Wavelength Why are some sounds high and some sounds low?	Students make observations of vibrations and sound waves to discover that high pitch sounds vibrate faster and have short wavelengths and low pitch sounds vibrate slower and have long wavelengths.	5P.2.1.1.1 Analyze and interpret data to show that energy can be transferred from place to place by sound, light, heat, and electric currents.

Water Cycle & Earth's Systems Unit (Watery Planet)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Hydrosphere & The Roles of Water How much water is in the world?	Students analyze and interpret data from world maps to determine the relative amounts of fresh, salt, and frozen water. Students figure out that while the Earth has a lot of water, most of Earth's water is not fresh or accessible.	4E.2.2.1 Interpret charts, maps, and/or graphs of the amounts of salt water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.
Lesson 2 	✨ New! ✨ Mixtures & Solutions How much salt is in the ocean?	Students create a model ocean to observe how salt seems to completely vanish when dissolved in water. Students measure and graph quantities to provide evidence that the salt is still in the solution, even though we can't see it.	5P.2.2.1 Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved.
Lesson 3 	Groundwater as a Natural Resource When you turn on the faucet, where does the water come from?	Students learn most people get fresh water from underground sources. Students determine the best place to settle a town by considering features of the landscape & the characteristics of the plants that thrive there.	4E.2.2.1 Interpret charts, maps, and/or graphs of the amounts of salt water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.
Lesson 4 	Water Cycle Can we make it rain?	Students create a model of the ocean and sky to investigate how temperature influences evaporation and condensation. Students figure out that higher ocean temperatures lead to more evaporation, thus leading to more rain.	observations or data to describe ways the geosphere, biosphere, hydrosphere, and atmosphere interact. 4E.1.1.2 Ask questions about how water moves through the Earth system and identify the type of question.
Lesson 5 	Natural Disasters & Engineering How can you save a town from a hurricane?	Students define the problem that a town needs protection from flooding. They design solutions using different types of flood protection. They realize flooding is caused by severe rainfall generated by hurricanes. Hurricanes are created where ocean temperatures are warm.	4E.3.2.2.1 Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans.

Chemical Reactions & Properties of Matter Unit (Chemical Magic)

	Topic & Guiding Question	Student Objectives	Minnesota Academic Standards in Science (2019)
Lesson 1 	Chemistry & Conservation of Matter Are magic potions real?	Students observe that a salt and vinegar solution will turn a dull penny shiny again indicating that substances can change other substances.	Foundational for 5P.3.1.1.1 Develop and refine a model to describe the matter is made of particles too small to be seen. Foundational for 5P.2.2.1.1 Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved.
Lesson 2 	Dissolving & Particulate Nature of Matter Could you transform something worthless into gold?	Students coat a steel nail in copper by placing it into the solution that dissolved bits of the penny. Students realize that substances can change to become particles too small to be seen, but they still exist.	5P.3.1.1.1 Develop and refine a model to describe the matter is made of particles too small to be seen. 5P.2.2.1.1 Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved.
Lesson 3 	Acids, Reactions, & Properties of Matter What would happen if you drank a glass of acid?	Students figure out that acids are very reactive substances. Students investigate reactions between different substances to determine how known acids react with other materials.	5P.1.2.1.3 Evaluate appropriate methods and tools to identify materials based on their properties prior to investigation.
Lesson 4 	Chemical Reactions What do fireworks, rubber, and Silly Putty have in common?	Students combine different substances together to discover that chemical reactions can create new substances.	5P.1.2.1.2 Conduct an investigation to determine whether the mixing of two or more substances results in new substances.
Lesson 5 	Gases & Particle Models Why do some things explode?	Students investigate and model the reaction between baking soda and vinegar. They figure out that gases are made of particles too small to be seen.	5P.3.1.1.1 Develop and refine a model to describe the matter is made of particles too small to be seen.
