

Lesson: Why are some sounds high and some sounds low?

| | |
|---------------------|---|
| amplitude | the height of a wave |
| experiment | a test used to discover new information about a question |
| frequency | a measure of how many waves go by you in a set amount of time |
| oscilloscope | a device that can show what sound waves look like |
| pitch | how high or how low a sound is when you hear it |
| sound wave | the way sounds travel in an up-and-down pattern |
| volume | how loud a sound is, measured by the height of a sound wave |
| wavelength | the distance between two points of a wave |
