Vocabulary

mystery science

Lesson: What do people who are blind see?

brain	a part of the body that receives and responds to signals from the senses and also stores memories
cornea	the clear layer in front of the eye that acts as a lens
experiment	a test used to discover new information about a question
eye	a part of the body that detects light and sends signals to the brain
function	what something does
iris	the colored part of the eye that is shaped like a donut
lens	a clear object that changes the direction of light as it passes through
light	energy that comes from sources like the Sun and lamps and makes it possible to see things
model	a pretend version of something that scientists use when the real thing is too big, small, or complicated to work with
pupil	the dark opening in the center of the eye
retina	the back of the eye that senses light and sends messages to the brain
structure	the specific form and shape of something
vision	the ability to see
