

## Lesson: Why do your biceps bulge?

---

|                  |   |
|------------------|---|
| <b>bicep</b>     | a large muscle in the upper arm   |
| <b>bones</b>     | the hard parts inside many animals that help give their bodies shape  |
| <b>dissect</b>   | to take something apart to study it   |
| <b>function</b>  | what something does   |
| <b>joint</b>     | a part of the body where two bones come together and can bend   |
| <b>model</b>     | a pretend version of something that scientists use when the real thing is too big, small, or complicated to work with |
| <b>muscle</b>    | a part of the body that attaches to bones and allows the body to move   |
| <b>observe</b>   | to pay close attention to something   |
| <b>skeleton</b>  | all of the bones of an animal, including humans   |
| <b>structure</b> | the specific form and shape of something  |
| <b>system</b>    | a group of things that affect each other and function as a whole  |
| <b>tendon</b>    | a part of the body that attaches muscle to bone   |
