Vocabulary

mystery science

Lesson: Why do your biceps bulge?

biceps	a large muscle in the upper arm
bones	the hard parts inside many animals that help give their bodies shape
function	what something does
joint	a part of the body where two bones come together and can bend
model	a pretend version of something that scientists use when the real thing is too big, small, or complicated to work with
muscle	a part of the body that attaches to bones and allows the body to move
observe	to pay close attention to something
skeleton	all of the bones of an animal, including humans
structure	the specific form and shape of something
system	a group of things that affect each other and work together as a whole
tendon	a part of the body that attaches muscle to bone
