Vocabulary

mystery science

Lesson: What kinds of animals might there be in the future?

artificial selection	the process of humans choosing certain traits of living things so that they are passed to the offspring
extinct	a type of living thing that once lived on Earth, but no longer exists
generation	all the living things born and living at around the same time
inherited trait	a trait of a living thing that comes from its parents
species	one specific kind of living thing that has similar characteristics and can produce offspring with one another
trait	something you can observe about a living thing, such as the pointy ears of a dog
variation	the different versions of a trait, such as the size of a dog
