

Lesson: Why do seeds have so many different shapes?

animal dispersal	when an animal moves a seed from one place to another
disperse	to move and spread out
model	a pretend version of something that scientists use when the real thing is too big, small, or complicated to work with
pattern	something that happens again and again and again in a way that can be predicted
seed	a part of a plant that can grow into a baby plant
structure	the specific form and shape of something
survive	to stay alive
