

## Lesson: How fast does the Earth spin?

---

<b>axis</b>	an imaginary line that goes through the North Pole and South Pole of the Earth
<b>circumference</b>	the distance around a circle
<b>model</b>	a pretend version of something that scientists use when the real thing is too big, small, or complicated to work with
<b>planet</b>	a large, round object in outer space that orbits a star
<b>rotate</b>	to spin or turn around a central point, like the Earth around its axis
