Mystery Science joins Discovery Education

Exciting news: Mystery Science has joined forces with Discovery Education! Our lessons that you know and love will stay the same; we'll just be able to expand our reach by being part of Discovery Education. More great lessons to come! We'll always be here to help your students #staycurious. Read the press release here.

Why is Mystery Science joining Discovery Education?

Since our founding, Mystery Science's goal has always been to help as many children as possible stay curious about the amazing world around them. We're currently reaching about 4 million children regularly. Working closely with Discovery Education will help us expand our reach—both in the US and internationally—so that more children can access our lessons.

What does that mean for Mystery Science lessons?

Nothing is going to change about us. We'll still be everything you know and love about Mystery Science: same products that help you help your students stay curious, same name, same website, same team!

Over time, the goal is to lean on the additional resources that Discovery Education brings to strengthen our program. This could take many different forms, and we'll be exploring a range of opportunities, from adding support for other languages, to expanding into additional grade levels and subjects, and more.

Will anything change with my ability to access Mystery Science?

No, nothing will change! Mystery Science will continue as a product and an organizational unit within Discovery Education. Your membership or trial will continue, and no new contracts or agreements are needed.

If you currently do not have a membership or free trial with us, and your school has a subscription to Discovery Education, you may be eligible for a free trial for the rest of this school year. Keep an eye out for an email if you are in that situation.
