Vocabulary

mystery science

Lesson: What's strong enough to make a canyon?

canyon	a deep hole in the ground formed over a long time by moving water
cliff	a high area of land with a side that is almost straight up-and-down
erosion	when tiny bits of rock are moved from one place to another
experiment	a test used to discover new information about a question
flow	to move along
hill	a high area of land that isn't as tall as a mountain
landform	a natural structure of Earth's surface, like a mountain or canyon
model	a pretend version of something that scientists use when the real thing is too big, small, or complicated to work with
mountain	a high area of land with steep sides
observe	to pay close attention to something
plateau	a high area of land that is flat on top
river	a long, thin area of water that flows
slope	where one side is higher than the other
steep	something that is very high up on one end and very low at the other end
