Vocabulary

Lesson: Why are some sounds high and some sounds low?

amplitude	the height of a wave
experiment	a test used to discover new information about a question
frequency	a measure of how many waves go by you in a set amount of time
oscilloscope	a device that can show what sound waves look like
pitch	how high or how low a sound is when you hear it
sound wave	the way sounds travel in an up-and-down pattern
volume	how loud a sound is, measured by the height of a sound wave
wavelength	the distance between two points of a wave
