

## Lesson: What if there were no electricity?

---

<b>battery</b>	a device that stores energy
<b>circuit</b>	a path where electricity can flow
<b>conductor</b>	a material that electrical energy easily travels through
<b>electricity (electrical energy)</b>	a type of energy, such as what usually powers light bulbs
<b>energy transfer</b>	when energy travels from one place to another
<b>experiment</b>	a test used to discover new information about a question
<b>insulator</b>	a material that electrical energy does not easily travel through
<b>invent</b>	to create something new, often an object or a way of doing something
<b>light energy</b>	energy that is in the form of light that can be seen
