

How could you make the biggest fruit in the world?

Lesson Assessment

1. Why do you think it took plant growers such a long time to create the roses sold in flower shops today?

2. "No two babies of a parent have exactly the same traits." How did this fact make it possible to grow giant pumpkins?

3. How can you tell whether two different fruits are just varieties of one kind of fruit, or if they're completely different fruits?

4. Just for fun: If you were going to use selection in order to create a giant fruit, which fruit would you like to make giant?
