

## Lesson: What would happen if you drank a glass of acid?

---

|                          |  |
|--------------------------|--|
| <b>acid</b>              | a substance that is usually sour, such as vinegar or orange juice  |
| <b>chemical reaction</b> | a process where one or more substances form a new substance  |
| <b>dissolve</b>          | when one substance mixes with another and it looks like it disappears, such as when sugar mixes into tea |
| <b>experiment</b>        | a test used to discover new information about a question   |
| <b>gas</b>               | a state of matter, such as water when it is steam  |
| <b>liquid</b>            | a state of matter, such as water when you can pour it  |
| <b>mix</b>               | to combine two or more things  |
| <b>observe</b>           | to pay close attention to something  |
| <b>property</b>          | something you can observe about an object or material  |
| <b>substance</b>         | a material that has specific properties  |
